## **DETAILED ACTION**

### ***Specification***

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: "Network Video Method Maximizing the Probability of Correct Frame Reconstruction".

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-3 and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Rhee (6,421,387).

Rhee, in Figures 1 and 4-6, discloses methods and systems for forward error correction based loss recovery for interactive video transmission that is the same controller and method for motion compensation video as specified in claims 1-3 and 5 of the present invention, comprising (a) assessing parameters of a packetized transmission channel (e.g. Internet); (b) assessing sizes of intra-coded frames I and predictively-coded frames P for an input video (Fig. 1); setting the rate of intra-coded frames and the rate of predictively-coded frames by maximizing a probability of correct

frame reconstruction using the results of steps (a) and (b), wherein the probability of correct frame reconstruction includes a rate of repeated transmission of predictively-coded frames (Fig. 6).

With respect to claim 3, Rhee also discloses packet loss rate over the Internet (see Abstract).

#### ***Allowable Subject Matter***

4. Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
